

Two questions were received for the System Preservation BMP:

1. Please clarify public information/public involvement expectations for this project, if any.

No need for open houses or similar public involvement but I would expect discussion with the five entities (Lewiston, Clarkston, Asotin, Nez Perce County, Asotin County)

2. Is an existing pavement condition inventory available for each jurisdiction, and if so, in what format

There is some:

Lewiston: we do have a pavement condition inventory available. We utilize Carte'Graph software in a SQL Server format.

Asotin County: I can export the data from the Mobility program as a .txt, .xls, .tif, .pdf, or .rtf file.
